MT2 1.2

Matthieu Brucher

MT2 is a free Open Source plugin emulating the MT2 pedal.

Usage

Here is how the parameters interact with the plugin:

- **Distortion** is the distortion level your want
- **Low level** is the amount of low frequency content
- **High level** is the amount of high frequency content
- **Mid level** is the amount of mid frequency content
- **Mid frequency** is the central frequency content

There are a few advanced parameters that are not available on a regular MT2 pedal and thus are not accessible through the UI:

- **Low Q** changes the Q parameter of the low-tone bell filter
- **High Q** changes the Q parameter of the high-tone shelf filter
- **Mid Q** changes the Q parameter of the mid-tone bell filter

Bugs

There shouldn't be bugs, but you never know. Please contact me or leave a message on Audio ToolKit web site or on my blog, on the announcement page.
